

Infection Control

Stanbridge College Alumni Workshop

Register by 6/21/2012

Overview

Hospital Acquired Infections, or "HAI's", continue to be a leading cause of death in hospitals. For this reason, disease prevention and infection control remain the highest priority among hospitals, doctors, and health care organizations. As a nursing student or professional, it is imperative you understand the latest policies and procedures as they relate to infection control. The Infection Control Workshop is designed to give you an in-depth understanding of the appropriate use of protective equipment and the latest techniques used by nurses and doctors to prevent the spread of infection.

Course Topics Include:

- Disease and Infection Control Prevention
- Identify Infection Control Programs
- Demonstrate Proper Use of Protective Equipment
- Proper Hand Washing Techniques
- Isolation Precautions and Procedures
- Identify Portals of Entry of Infection
- Identify Pathogens Most Common in Hospitals
- Chain of Infection and Mode of Transmission
- Standard Precautions
- CDC Guidelines for Hospitals
- History of Infections and Statistics
